EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR, 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Specification:

On page 2, line 1, "for" has been deleted.

On page 3, line 8, -- location -- has been inserted after "upstream".

The above changes to the specification have been made to correct grammatical errors.

Reasons for Allowance

The instant application is directed to an unobvious improvement over the invention patented in United Kingdom Patent 622,415. United Kingdom Patent 622,415 discloses a composite fan (a compressor is considered to be a fan since it moves air) comprising a first fan 3/4 with plural rotary vanes and plural first guide vanes 5/7 located on an air outlet side of the first rotary vanes, and a second unnumbered fan located on an air outlet side of the first fan having plural second rotary vanes, with plural second guide vanes 6/8/9 located on an air inlet side of the second rotary vanes. The improvement comprises each of the second guide vanes

being corresponded to and coupled with each of the first guide vanes to form a continuous curved surface. In the United Kingdom Patent, all of the guide vanes 5, 6, 7, 8, and 9 are separated from one another and do not form a continuous curved surface. None of the prior art of record discloses or suggests the improvement.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Huang is cited to show a multi stage axial flow fan with stators located between rotors.

Weske is cited to show an axial flow fan with spaced apart stator blade rows.
